

# LUBRICURVE ELECTRO 5

## ELECTRIC RAIL LUBRICATOR AND FRICTION MODIFIER

The Electro 5 electric rail lubricator system provides an alternative to its bigger brothers the Electro 10 and Electro 20.

A smaller cabinet means the full benefits of an electric rail lubricator can be utilised in areas where space is a problem. In addition the cabinet can be installed on a pole or frame. Alternatively it can be wall mounted where a post or frame are unsuitable.

The system can be powered by solar panels or mains electricity and offers full flexibility in all areas.

The Electro 5 can be used as a gauge face lubricator with EasiBlades and EasiCheck blades or alternatively as a top of rail system with Friction-Ease blades. This is a versatile, economical unit and enhances our range of electric applicators.
